

ALLEY BETWEEN RIVERSIDE DRIVE SE AND WILSON AVENUE SE FROM TH 23 TO 7TH STREET SE IMPROVEMENTS

CONSTRUCTION REVIEW

Welcome to the first edition of the Construction Review for the upcoming street and utility replacement project in your neighborhood area.

This first newsletter is aimed at answering some of the general questions and concerns relating to the upcoming construction project. Please note that this newsletter and any future newsletters will be on the City's website at www.ci.stcloud.mn.us, click on Road Construction Projects.

Key Contacts

The City Council awarded this project to Kuechle Underground, Inc. as the general contractor. **Noel Dalton will be the City of St. Cloud Resident Project Representative (RPR) for this project and can be reached directly at 320-293-4932.** As the RPR, Noel will be on-site working with the Contractor to assure quality work and will also serve as a liaison between the residents and construction personnel. Once construction begins, Noel will handle job-specific questions, such as access to your property.

Zac Borgerding is the City of St. Cloud Project Engineer and may be reached in the office at 320-255-7240, by cell at 320-345-0385 or by email at zachary.borgerding@ci.stcloud.mn.us.

During the weekend or after hours, if you know of a construction-related emergency, please call one of the Contractor's representatives for assistance at the following phone numbers:

- Ryan Haag (320) 249-8205
- Chuck Geislinger (320) 493-9205
- Brandon Kuechle (320) 492-3796

Please restrict use of these numbers to emergency use only.

Scope of the Project

The work consists of utility work (replacement of sanitary sewer, abandonment of water main) and alley surfacing in the alley between Riverside Drive SE and Wilson Avenue SE from TH 23 to 7th Street SE.

Construction Schedule

Construction Timeline:

Estimated start date: May 13, 2019

Utility work completion: End of July, 2019

Alley paving: August, 2019

Final completion, including punch list items: June, 2020

Other Construction Activity

In conjunction with the City contract, private utilities such as Xcel Energy, Centurylink, etc. are updating and/or relocating their systems in the area. Xcel Energy has started work in the project area relocating their gas and electric utilities.

Please contact Xcel Energy Representative, Don Hummer at 320-255-8630 with any questions regarding their work. The City is not involved in Xcel's work and will not be able to provide direct information.

Sprinkler System and Specialized Landscaping Within City Right-of-Way

As always with a project of this magnitude, construction activities will disturb the area within and close to the alley right-of-way.

Residents are strongly encouraged to remove any special landscaping, planters, bushes, irrigation system, pet containment system, etc. out of these areas to ensure they are not damaged during construction before May 13, 2019.

With respect to irrigation distribution pipes, pipes should be exposed and pulled up to the property line so that they are visible to the Contractor. Since the sprinkler heads are most often the most expensive component of the system, consider removing them from the distribution pipes. Apply duct tape to the end of the pipes to keep out dirt and debris.

Please contact Brandon Kuechle with Kuechle Underground, Inc. at 320-492-3796 for any additional coordination needs. After this date, the City of St. Cloud will have the Contractor remove any remaining landscaping in conflict with construction of the project. The City and its Contractor will not be held liable for damage or salvaging of any sprinkler system or specialized landscaping within the City right-of-way.

Utility Service Lines

Under the City improvements, the sanitary sewer mains will be replaced along with sewer services from the main to approximately the property line. **We strongly encourage everyone to review the condition of their individual private service lines now if you have not already done so.** There will be a narrow window built into the project timeline that will allow residents to replace their existing sanitary sewer services and/or water services.

With this project, property owners receiving water service from the alley will be connected to a temporary water supply by the City's Contractor and then the water main in the alley will be shut off and abandoned.

Property owners receiving water service from the alley will need to hire their own Contractor to reroute their private water service. Owners will have approximately 60 days from the time the alley water main is abandoned to reroute their private water service to an existing water service connection point that has already been stubbed out from water mains at either Riverside Drive SE or Wilson Avenue SE.

Property owners that need to reroute their water service from the alley must schedule this work with their contractor so that the work begins after the alley water main has been shut down and decommissioned. We anticipate the alley water main to be taken off-line and temporary water service installed towards the end of May 2019. Therefore, property owners should anticipate scheduling their contractor to reroute their water service during the months of June or July. The work must be completed by July 31, 2019.

It is imperative that you contact RPR Noel Dalton at 320-293-4932 to coordinate your work with the City's construction work.

FAQ's

Following are some frequently asked questions and answers regarding the installation of sewer and water service lines between the property line and the house:

Q. How do I tell if my service lines are in need of replacement?

- A.**
1. If the sanitary sewer line requires periodic cleaning and root cutting, it is likely in need of replacement.
 2. If you know that the sanitary sewer line has not been replaced since the early 1970's, it is likely made of clay tile and should be replaced. The older clay tile lines did not have very good joints. Offset and leaky joints can lead to root intrusion and sewage blockage problems.

3. If you are still unsure of the condition of your service lines, please check with the inspector on the job site when the City Contractor is installing the new utilities in front of your property. While only the end of your service line will be exposed in the street, we will still be able to provide you with some information on the condition of your service line at that point.

Q. *Who can I hire to replace my utility service lines?*

- A.**
1. If you decide to upgrade your service lines, you will need to hire a licensed excavator. We have enclosed a list of excavators licensed by the City. The Contractor's crews installing the improvements in the roadway utilize large equipment and are not really set up for the installation of the service lines back to the homes.
 2. If you have not already done so, it is suggested that you obtain quotes from at least three licensed excavators for the cost of the replacement of your service lines and that you **get quotes early on** even if you are not sure you are going to replace your service. Contractors tend to get busier as the season progresses and it is much harder to find contractors to give quotes.

Safety Concerns

Large equipment and construction are fascinating to children. Please help us to make this a safe construction season by watching for any dangerous situations and keeping children safely away from any equipment and materials at all times throughout the project.

Whenever large equipment is used in the confines of an existing neighborhood, the potential for an accident exists. Please remember to maintain a safe distance back from all construction activities and to drive with extra caution throughout the entire area.

Access for Residents and Businesses

The project will be coordinated in an attempt to provide you with access to your property during construction. In a project of this type, access will be difficult at times. We ask for your cooperation and patience. We also ask that special care be taken when traveling through construction zones. By working together, we can minimize any inconveniences and ensure a safe construction site.

With the above construction start date, conflicts with special events are unavoidable. If you have a graduation party or other special event scheduled for this summer, please contact RPR Noel Dalton at 320-293-4932. He will work with the Contractor to help ensure the roads leading to your home are in drivable condition for your guests. The roads will likely be in a disturbed state, but this is an unavoidable situation when municipal utilities are installed in an existing neighborhood.

If anyone has special access needs, please bring it to our attention so that we can attempt to meet your needs.

Refuse and Recycling Pick Up

Residents are asked to take their refuse and recycling out the night before or by 6:00 a.m. on the scheduled pick up day. During construction, placement of your refuse/recycling will be either from the alleys or the streets. For example, if the Contractor is working in the alley, then pick up will be from the street. Please contact City representative, Brad Kothman, at 320-650-2917 with any refuse/recycling questions.

Mail Delivery

Please note mail delivery is not anticipated to be disrupted.

Construction Correspondence

During construction activities, the Contractor or Resident Project Representative will send out notices of different events such as the need to contact them about a construction-related issue concerning your property. These notices do not get mailed and are usually delivered to you at your door. If no one is available when they deliver the notices, they will place them at your door or on the outside of your mailbox. Please routinely check for notifications/correspondence.

If you rent your house, please share this information with your renters or have them call the Engineering Department at 320-255-7249 to be added to the list to receive the newsletters. As stated earlier, all newsletters will be posted on the City website at www.ci.stcloud.mn.us.
